Calculus, originally called infinitesimal calculus or "the calculus of infinitesimals", is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus and integral calculus; the

former concerns instantaneous rates of change, and the slopes ...

Pre-calculus integration. The first
documented systematic technique
capable of determining integrals is the
method of exhaustion of the ancient
Greek astronomer Eudoxus (ca. 370 BC),
which sought to find areas and volumes

by breaking them up into an infinite number of divisions for which the area or volume was known. This method was further developed and employed by Archimedes in the 3rd ...

The sawtooth function, named after it's saw-like appearance, is a relatively

simple discontinuous function, defined as f (t) = t for the initial period (from -π to π in the above image).. This periodic function then repeats (as shown by the first and last lines on the above image). The additional periods are defined by a periodic extension of f (t): f (t + kT) = f (t).
