Cerebellar hypoplasia is a neurological condition in which the cerebellum is not completely developed or is smaller than it should be. It may occur with a variety of congenital syndromes, metabolic disorders and neurodegenerative disorders; therefore signs and symptoms may depend upon the associated condition an affected individual has. The most common findings are developmental and speech ...

Expression of other regulators of cerebellar homeostasis linked to human disease was also markedly decreased in double (but not single)-mutant cerebella including carbonic anhydrase VIII (CA8), whose loss results in ataxic waddles mice and cerebellar ataxia in humans (table S2 and fig. S7) (25, 26). Notably, while the decrease in ITPR1 and ...

Paraneoplastic cerebellar degeneration will cause irregular saccades in all directions. Cerebellar pathology is only one of the many causes of pathological nystagmus. Nystagmus can be observed in patients with a vestibular disease, such as benign paroxysmal positional vertigo, and also in patients with toxicity (e.g. phenytoin).

Thyroid gland (ventral view) Infection. Sometimes cerebellar ataxia can result from infection, which causes inflammation in the cerebellum, impairing its ability to function normally. Ataxia is more commonly caused by viral infections like chickenpox, but can be caused by bacterial infections too, such as Lyme disease. This results in a sudden, or acute, attack of ataxia, in a previously ...

BACKGROUND AND PURPOSE: Distribution of lesions or involvement of specific anatomic sites can suggest the diagnosis of disease. The purpose of this study was to investigate what diseases affect both middle cerebellar peduncles (MCPs) and to evaluate other MR features for differential diagnosis. METHODS: MR findings of 27 patients (14 male and 13 female; age range, 4-77 years [mean, 48.5 ...

A motor program is an abstract representation of movement that centrally organizes and controls the many degrees of freedom involved in performing an action. p. 182 Signals transmitted through efferent and afferent pathways allow the central nervous system to anticipate, plan or guide movement. Evidence for the concept of motor programs include the following: p. 182
