Enron Modbus For Flow Devices
Modbus is a data communications protocol originally published by Modicon (now Schneider Electric) in 1979 for use with its programmable logic controllers (PLCs). Modbus has become a de facto standard communication protocol and is now a commonly available means of connecting industrial electronic devices.. Modbus is popular in industrial environments because it is openly published and royalty-free.

However, Enron-MB takes the debatable step of returning 4-bytes per register instead of the 2-bytes implied by the term "holding register" in the Modbus specification. This means a poll of registers 4x5001 and 4x5002 in Enron-Modbus returns 8-bytes or two 32-bit integers, whereas Standard Modbus would only return 4-bytes or one 32-bit integer ...
