continuously train all of its faculty and administration in how the brain learns best, our school launched the Center for Transformative Teaching and Learning (CTTL) in 2011, the first Mind, Brain, and Education (MBE) research center based in a pre-collegiate school.

Every Educator Needs to Know How the Brain Learns

The work of Kandel and colleagues laid the foundation for our understanding of how the brain learns, for which they shared the Nobel Prize in 2000. We now know that the basic unit of learning isn't a brain region or a molecule or even a neuron: it's the synapse. ³ This is true all the way from slugs and bugs to mice and humans.

What can I do to develop a learning brain?

The Learning Brain

The vast majority of our behaviors, both conscious and unconscious, are guided by our ability to store meaningful experiences in memory and recall them when needed. As complex as it may seem, scientists are steadily making progress in unraveling how the brain accomplishes this feat. For University of Chicago neuroscientist David Freedman, PhD, associate professor of neurobiology, the key to better understanding the brain's ability to learn has been to focus on a specific cognitive function ...
