Introduction to Probability Models - 11th Edition

Solution: Since $p(0) = 1 - p$, $p(1) = p$, we have $E[X] = 0(1 - p) + 1(p) = p$ Thus, the expected number of successes in a single trial is just the probability that the trial will be a success.

Introduction to Probability Models - 12th Edition

Introduction to Probability Models, Tenth Edition, provides an introduction to elementary probability theory and stochastic processes. There are two approaches to the study of probability theory. One is heuristic and nonrigorous, and attempts to develop in students an intuitive feel for the subject that enables him or her to think probabilistically.
