Vtec Engine Explanation
VTEC (Variable Valve Timing & Lift Electronic Control) is a system developed by Honda to improve the volumetric efficiency of a four-stroke internal combustion engine, resulting in higher performance at high RPM, and lower fuel consumption at low RPM.The VTEC system uses two (or occasionally three) camshaft profiles and hydraulically selects between profiles.

Budget K series engine swap parts list to help you get your K on like a boss. By Brian Gillesple . Here is the list of parts with prices used for our budget K-series engine swap. If you're the impatient type and want to cut to the total, it's at the bottom of the list. After the list is a description of the parts and possible alternatives.

Budget K Series Engine Swap - The Parts List - VTEC Academy
I can assure you that is WAAAY sportier than any of those approaches. The other fun NYC approach is the River Visual to RWY 29 in EWR. You essentially overfly Teterboro, head out over the Meadowlands, continue descending and configuring out to the Hudson and then you hook a right turn into RWY 29 by flying in between the bridge span for I-78 and complete the rollout onto runway heading about ...

Background theory. The valves within an internal combustion engine are used to control the flow of the intake and exhaust gases into and out of the combustion chamber.The timing, duration and lift of these valve events has a significant impact on engine performance. Without variable valve timing or variable valve lift, the valve timing is the same for all engine speeds and conditions ...

The big bore engine heads, like yours, can be made to fit on a small bore engine (848, 997, 998, 1098) but it is seldom done. As to what type of 1275 I can't help further. If you are sure the engine and gearbox are original together then the type of shift mechanism can help with an answer. As for the block stamping, I don't have any listings.

Classic Mini Engine - Identification Data UPDATED
Honda. You'd never expect this. Their 1.5L Turbo Petrol Vtec engine suffered from this problem. No blown turbos or engines. Fuel was making its way past the piston rings and diluting the oil, which led to the oil being less effective at lubricating, cooling the engine and turbocharger as it would have reduced viscosity.

I like your explanation about breaking the engine in and checking consumption afterwards makes sense. And, perhaps this is why Subaru has you do the initial oil change at 3K. But, I would like to think that a modern, well designed, relatively high compression engine would not consume noticeable amounts of oil.
